How the Global Fund Improves PEPFAR Investments

The President's Emergency Plan for AIDS Relief (PEPFAR) and the Global Fund to Fight AIDS, Tuberculosis and Malaria (GF) work together in the world's most highly burdened countries to provide life-saving antiretroviral drugs (ARVs) for HIV.

In 2017, the GF spent \$886 million on ARVs in PEPFAR countries, and it is frequently the primary purchaser of ARVs for an entire country. In these areas, such as Malawi where HIV prevalence is 10% and the GF purchases nearly 100% of the ARVs, PEPFAR relies heavily on GF investments to reach its goals.

Global Fund contributed 49.6% (\$886 million) of the total invested in ARVs in 2017.
